

## **DETAILED ACTION**

### **Response to Arguments**

Applicant's arguments, see applicant's remark, filed 4/4/2011, with respect to the objection of drawing, the 112th rejection and the art rejection have been fully considered and are persuasive. The rejections of claims 70,72,73,77-82,103-112 and 114-116 have been withdrawn.

### **Allowable Subject Matter**

Claims 70,72,73,77-82,103-112 and 114-116 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record either taken singularly or in combination fails to disclose the invention as claimed. In particular, references to Wu's 048, Scott's 682 and Gektin's 315 are the closest prior art but fail to disclose that the reservoir comprising an upper chamber and a lower chamber, the upper chamber and the lower chamber being separate chambers that are fluidly coupled together by an inlet passage and an outlet passage, the inlet passage being a passage that directs the cooling liquid from the upper chamber to the lower chamber and the outlet passage being a passage that directs the cooling liquid from the lower chamber to the upper chamber, the lower chamber having a recessed cavity and the impeller positioned within the recesses cavity of the lower chamber such that a bottom face of the impeller faces an inside surface of the heat exchange interface, in combination with other limitations of the claims. Reference to Wu does not disclose any inlet and outlet passage to connect the upper and the lower chamber.
